

Gyrocopter Cage Match

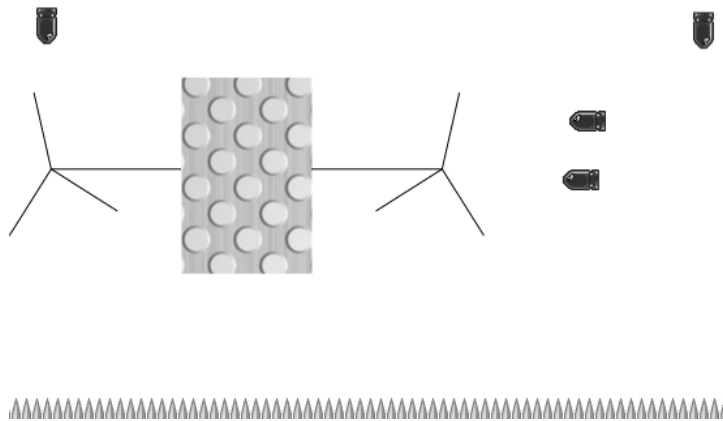

Nate Phillips

Original Design

- Side scroller
- High scores page
- An options menu
- Dynamic difficulty

Design Evolution

- Developed into a cage-based survival game.
- Points based on how long a player has survived.

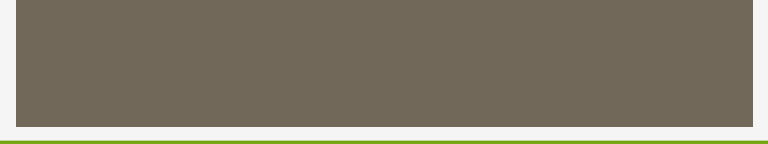

Additional Features

Contains:

- High score page
- Pause menu
- Options menu
- Rules section

Interesting Problems

- How to keep the options menu and scores from resetting every time a user started a new game.
- How to pause the game

Questions?

Overall Approach

- Create a vehicle and a slew of bullets and keep track of their position (since this is canvas we are dealing with).
- During each animation frame, test to see if the bullets or spikes have collided with the vehicle.
- Every time a bullet reaches the spikes, it disappears (and another bullet spawns), and the player gains a point.
