

Radial Visualization

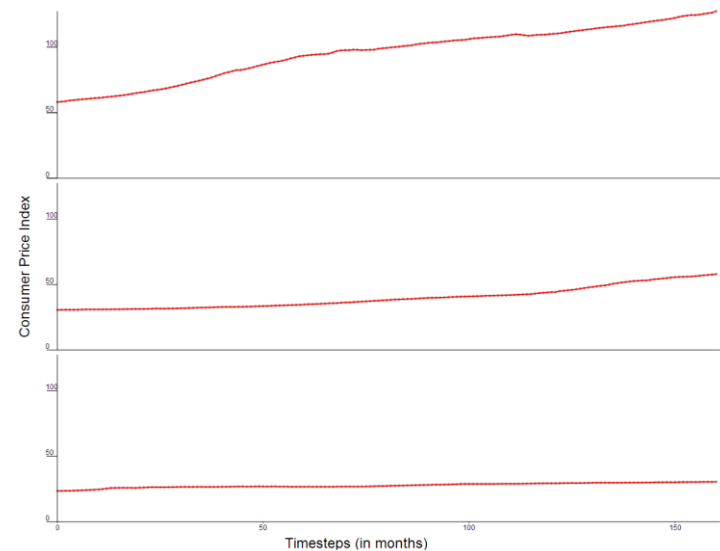

Nate Phillips

Goals

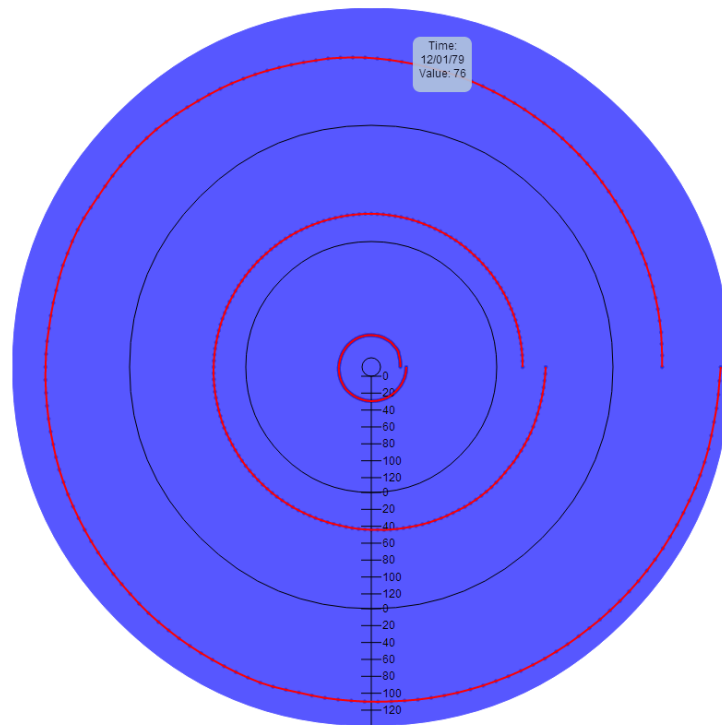

- To design a novel visualization method.
- To examine its effectiveness, compared to the standard line chart.

Concept

- The idea is to represent a line chart on a circle.
- The objective of this is to make it easier to see periodic trends in the data.

Visualization

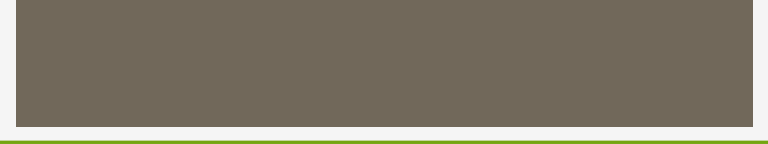

Interaction

- Users can specify:
 - Type of visualization (line graph vs. radial visualization)
 - Data range
 - Number of partitions

Results

- Issues:
 - Harder to see small data changes on radial visualization.
 - For both, it is hard to see any changes in data for a large number of partitions.
- Possible solutions:
 - Different data
 - A zoomed-in view
